

◆ EMTD COLLABORATIVE

The EMTD model is a progressive approach to continuous improvement. By viewing similar companies as partners rather than competitors, EMTD companies have come together to:

- Implement Best Practices
- Leverage Purchasing Power
- Share Market Information
- Create Sales Opportunities

The result...better solutions for clients.

*A Collaborative Providing
One-Stop Solutions*

❖ MILITARY & AEROSPACE MARKETS

EMTD companies have worked with over 30 prime contractors and 20 direct government agencies to provide Americans with quality products to better defend and protect our country. All EMTD members are certified small businesses and registered with the CCR. Represented within the collaborative are companies which are HUB zone, veteran owned, and women owned certified. The primary NAICS codes of the EMTD include 326199, 332710, 332919, 333511, 333513, 333514, 333515.

The EMTD will make your life easier through a unique collaborative approach to manufacturing. By operating as a collaborative, the EMTD captures the strengths of its many members so that you can easily procure tooling, parts, and access capacity to ensure the success of your project.

SIMPLIFICATION

By using the EMTD "one-stop solution" collaborative, your life becomes easier. You have the freedom to place one PO for many different components. You receive more consistent pricing and delivery, regardless of your project size. Project budgets and time lines become more accurate. It's simple, it's accurate, and gives you more time to spend on other demands.

CAPACITY:

The EMTD offers a full range of manufacturing services to produce highly engineered metal and plastic components.

- 15 facilities
- 400+ team members
- Thousands of machine hours

LOWERED RISK:

The manufacturing of precision engineered tooling and components relies on a competent, dependable, and responsive supply chain. The EMTD's collaborative model leverages the knowledge of a large and diverse team while operating with the responsiveness of a small company. A network of overlapping skills and equipment provides solutions you can depend on.

❖ QUALITY

Military and aerospace tooling and components require a high level of accuracy and repeatability. EMTD has aligned all its facilities around the ISO9001:2000 standard. This alignment ensures that the manufacturing offered by the EMTD is consistently producing quality products and services that meet your demands. Represented within the collaborative are companies which are S-523 certified and AS9100 compliant.

❖ EXPERIENCE

Using the EMTD, you will have access to a unique knowledge network of experienced people. A fully developed and responsive supply chain covers everything from 5-Axis machining to secondary services that provide full manufacturing solutions for you.

The engineering team of the EMTD has helped many clients design out costs and reduce lead times so a product can quickly meet deadlines for testing, engineering approval, or market entry. Data and ideas are easily shared via the web, conferencing, and the use of a wide range of CAD software packages.
